(U) Review of DHS' Information Security Program for Intelligence Systems for Fiscal Year 2014

(U) Unclassified Summary

(U) We evaluated the Department of Homeland Security’s (DHS) enterprise-wide security program for Top Secret/Sensitive Compartmented Information intelligence systems. Pursuant to the Federal Information Security Management Act, we reviewed the Department’s security program including its policies, procedures, and system security controls for enterprise-wide intelligence systems. In doing so, we assessed the Department’s continuous monitoring, configuration management, identity and access management, incident response and reporting, risk management, security training, plans of actions and milestones, remote access, contingency planning, contractor systems and security capital planning. The United States Coast Guard (USCG) has migrated the Coast Guard Intelligence Support System into a new system that is supported by DHS, the Defense Intelligence Agency and USCG.

(U) Since the Fiscal Year 2013 evaluation, I&A continues to provide effective oversight of department-wide systems and maintains programs to monitor ongoing security practices. I&A has updated its security policies and procedures and has implemented strong configuration management controls for DHS’ Classified Local Area Network (C-LAN). We identified deficiencies in the areas of I&A’s incident response and reporting and contingency planning; and in USCG’s continuous monitoring, configuration management, risk management, security training, and contingency planning. Fieldwork was conducted from May through August 2014. (OIG-14-135, September 2014, ITA)
